

techno Metal Post

SUPPORT FOR ENGINEERING AND ARCHITECTURAL FIRMS

PROJECT ANALYSIS AND APPROVAL PROCESS

Techno Metal Post's Engineering Department provides support to both engineering and architectural firms throughout the evaluation, design, and on-site implementation process. Our engineering department can also assist its clients across various sectors including residential, commercial, or industrial. Techno Metal Post's engineers are authorized to issue compliance documents, in all municipalities, where our products are available.

URBAN INSTALLATIONS

TECHNO METAL POST

THE ADVANTAGES

INSTALLATION EQUIPMENT

Since each pile foundation job site is unique, Techno Metal Post designed multiple machines. Each comes in different sizes, power, and capacities. Regardless of which machine is used, they are all designed to perform rigorous and reliable work. When our engineers call for larger diameter piles having a higher load-bearing capacity, our 'heavyduty' machine is ideal for large-scale construction sites.

WORLDWIDE CERTIFIED TECHNOLOGY

Our technology is certified and recognized by qualified officials in several countries. Our quality and reliability are also recognized by thousands of construction professionals and clients around the world.

STRONG, SOLID, AND DURABLE

The construction of a multi-story building must be carried out properly and correctly. It's simply not just about the aesthetics of the project, but what lies beneath it all. Starting with a stable and durable foundation on helical piles, allows you to achieve your project goals. Regardless of soil quality, Techno Metal Post can adapt to your project's needs.
